

THEMES & SCOPE FRAMEWORK

DIVISION A — SCHOOL LEVEL (CLASSES VI–VIII)

Scope

Simple working models, charts, awareness activities, eco-friendly demonstrations, and low-cost innovations based on daily life and community problems.

Theme Code	Theme Name	Focus Area	Expectations	Suggested Problem Statements
A1	Water Conservation, Pollution and Sanitation	Water conservation, clean water and hygiene awareness	Awareness models, low-cost demonstrations and community-focused activities	1. Rainwater harvesting model, 2. Simple water filtration system, 3. Handwashing station using waste materials 4. Safe drinking water awareness 5. Water-saving techniques at home 6. School water conservation campaign 7. Water pollution awareness model 8. Smart water storage methods 9. Reuse of wastewater for gardening 10. Clean village and sanitation awareness
A2	Land Pollution, Waste Management and Recycling	Waste segregation, recycling and environmental cleanliness	Best-out-of-waste projects, awareness models and eco-friendly innovations	1. Wet and dry waste segregation system 2. Compost preparation from kitchen waste 3. Plastic bottle reuse ideas 4. Paper recycling methods 5. Eco-friendly bag preparation 6. Plastic-free school campaign 7. Classroom waste management system 8. Recycling awareness activities 9. Best out of waste-decorative items 10. Clean surroundings and waste reduction awareness
A3	Energy Conservation and Renewable Energy	Saving electricity and using renewable energy	Simple working models and awareness activities	1. Solar cooker model 2. Windmill model 3. Save electricity at home 4. Bicycle-powered light 5. Solar-powered light 6. Energy-saving habits 7. Natural light in classroom 8. Green home ideas 9. Renewable energy awareness 10. Switch-off unused lights campaign

Theme Code	Theme Name	Focus Area	Expectations	Suggested Problem Statements
A4	Environment Conservation	Environmental protection and nature awareness	Awareness campaigns, charts and simple eco-models	1. Tree plantation awareness 2. Save birds campaign 3. Air pollution awareness 4. Plastic pollution effects 5. Green school campus ideas 6. Importance of clean surroundings 7. Save forests awareness 8. Protect animals and plants 9. Eco-friendly lifestyle habits 10. Importance of clean air and water
A5	Road Safety and Public Safety	Traffic rules and public safety awareness	Safety awareness models, charts and demonstrations	1. Traffic signal model 2. Importance of wearing helmets 3. Zebra crossing awareness 4. Safe road crossing methods 5. Road safety signs awareness 6. School bus safety rules 7. Pedestrian safety awareness 8. Emergency contact awareness 9. Safety rules for children 10. Traffic awareness campaign
A6	Science in Daily Life	Basic science and everyday applications	Simple experiments and demonstration models	1. Volcano model 2. Water cycle model 3. Electric circuit model 4. Magnet experiment 5. Hydraulic lift model 6. Air pressure experiment 7. Solar system model 8. Gravity experiment 9. Weather station model 10. Simple machine models
A7	Science in Health, Nutrition and Hygiene Life	Healthy lifestyle awareness	Charts, awareness activities and simple demonstration models	1. Importance of handwashing 2. Healthy eating habits 3. Balanced diet chart 4. Clean drinking water awareness 5. Personal hygiene practices 6. Exercise and fitness awareness 7. School cleanliness campaign

Theme Code	Theme Name	Focus Area	Expectations	Suggested Problem Statements
				8. Safe food storage methods 9. Junk food awareness 10. Daily hygiene routine awareness
A8	Bhartiya Knowledge Systems, Culture and Traditional Practices	Indian culture, traditions, rituals and sustainable lifestyle practices	Cultural demonstrations, awareness models and activity-based projects	1. Traditional festivals of India and their importance 2. Indian rituals and traditions 3. Traditional Indian food systems 4. Yoga and meditation awareness 5. Indian classical dance and music 6. Traditional clothing and handloom awareness 7. Folk arts and crafts 8. Importance of family values 9. Eco-friendly village traditions 10. Indian temple architecture and culture

DIVISION B — SCHOOL LEVEL (CLASSES IX–XII)

Scope

Problem-solving projects, practical demonstrations, experimental models, surveys, field studies, and community-focused

Theme Code	Theme Name	Focus Area	Expectations	Suggested Problem Statements
B1	Agriculture and Horticulture Innovations	Agriculture, horticulture and sustainable farming	Practical models, surveys and low-cost farming innovations	1. Smart irrigation system 2. Apple storage and preservation methods 3. Greenhouse farming model 4. Organic farming practices 5. Pest control in crops 6. Rainwater use in farming 7. Soil conservation methods 8. Kitchen garden development 9. Sustainable hill farming ideas 10. Reducing food wastage after harvesting
B2	Disaster Preparedness and Early Warning Systems	Disaster awareness, safety and emergency preparedness	Awareness systems, safety models and community preparedness projects	1. Landslide warning model 2. Flood safety awareness system 3. Earthquake-safe house model 4. Forest fire awareness 5. Emergency rescue kit preparation 6. School evacuation planning 7. Cloudburst awareness system 8. Emergency communication ideas 9. Disaster management awareness campaign 10. Community safety preparedness model
B3	Climate Change and Sustainable Environment	Climate awareness and environmental sustainability	Environmental projects, surveys and awareness activities	1. Climate change awareness campaign 2. Water conservation methods 3. Pollution reduction ideas 4. Biodiversity protection awareness 5. Green village concepts 6. Glacier awareness projects 7. Waste reduction methods 8. Eco-friendly lifestyle practices 9. Tree plantation campaigns 10. Sustainable environment models

Theme Code	Theme Name	Focus Area	Expectations	Suggested Problem Statements
B4	Health, Hygiene and Community Well-being	Public health, hygiene and sanitation awareness	Community health projects, awareness systems and practical models	1. Menstrual hygiene awareness 2. Rural sanitation improvement 3. Clean drinking water awareness 4. Water purification methods 5. Disease prevention awareness 6. Nutrition and balanced diet awareness 7. Personal hygiene practices 8. Community health survey 9. School cleanliness campaign 10. Low-cost handwashing system
B5	Digital Education and Skill Development	Smart learning, digital literacy and student skill development	Educational tools, digital learning systems and awareness projects	1. Smart learning kits 2. Digital literacy awareness 3. Educational mobile applications 4. Career guidance systems 5. Online learning support tools 6. Inclusive learning methods 7. Educational games for students 8. Rural digital education support 9. Technology-based classroom learning 10. Student skill development platforms
B6	Renewable Energy and Green Technology	Renewable energy and energy conservation	Simple working models and awareness activities	1. Solar-powered light system 2. Windmill model 3. Energy-saving home ideas 4. Solar street light model 5. Save electricity awareness campaign 6. Renewable energy use in schools 7. Natural lighting in classrooms 8. Smart electricity-saving system 9. Green energy for villages 10. Bicycle-powered electricity model
B7	Water Conservation and Spring Rejuvenation	Water conservation and water management	Water conservation projects, surveys and practical models	1. Rainwater harvesting model 2. Groundwater recharge methods 3. Water-saving techniques in homes 4. Greywater reuse system 5. Water conservation awareness campaign 6. Smart irrigation methods 7. Preventing water wastage 8. Village water management ideas 9. Spring rejuvenation awareness 10. Sustainable water use practices

Theme Code	Theme Name	Focus Area	Expectations	Suggested Problem Statements
B8	Traditional Knowledge and Modern Science	Indian traditional knowledge and sustainable practices	Awareness projects, simple models and community-based activities	1. Herbal plants and their uses 2. Traditional farming methods 3. Ayurveda awareness 4. Traditional water conservation methods 5. Eco-friendly village practices 6. Traditional Indian houses 7. Millets and healthy food awareness 8. Traditional food preservation methods 9. Indian culture and sustainable lifestyle 10. Local handicrafts and village traditions
B9	Smart Technology and Automation	Smart systems and basic automation	Simple working models and beginner technology projects	1. Smart home model 2. Automatic street light system 3. Smart attendance system 4. Water level indicator 5. Automatic door system 6. Smart dustbin model 7. Traffic signal automation model 8. Automatic classroom bell system 9. Smart parking model 10. Basic robotics model
B9	Smart Technology and Automation	Smart systems and basic automation	Simple working models and beginner technology projects	1. Smart home model 2. Automatic street light system 3. Smart attendance system 4. Water level indicator 5. Automatic door system 6. Smart dustbin model 7. Traffic signal automation model 8. Automatic classroom bell system 9. Smart parking model 10. Basic robotics model
B10	Entrepreneurship and Social Innovation	Himachal-based startup ideas, local livelihood and community innovation	Business models, local product development and community-focused solutions	1. Apple-based product business ideas 2. Himachali handicraft promotion 3. Eco-tourism ideas for villages 4. Local food and café startup concepts 5. Wool and handloom product innovations 6. Herbal product business ideas 7. Sustainable tourism promotion in Himachal 8. Women self-help group business models 9. Organic farming-based entrepreneurship 10. Local market promotion.

DIVISION C — UNDERGRADUATE LEVEL (B.Tech / B.Sc / BBA / BCA / Equivalent)

Scope

Functional prototypes, software applications, technical models, field-based studies, startup ideas and scalable technology-enabled solutions.

Theme Code	Theme Name	Focus Area	Expectations	Suggested Problem Statements
C1	AI, Smart Devices and Intelligent Systems	Artificial intelligence, automation and smart technologies	Functional prototypes, software systems and intelligent applications	1. Smart accident detection system 2. Driver drowsiness detection system 3. AI-based waste segregation 4. Smart village monitoring dashboard 5. Smart traffic management system 6. AI-based attendance system 7. Intelligent classroom automation 8. AI healthcare assistant 9. Smart energy monitoring system 10. AI-based security and surveillance system
C2	Disaster Management and Mountain Safety	Disaster resilience, mountain safety and emergency response systems	Deployable prototypes, monitoring systems and predictive solutions	1. Landslide monitoring system 2. Cloudburst prediction system 3. Glacier monitoring platform 4. Hazard mapping system 5. Flood early warning system 6. Forest fire detection system 7. Emergency communication network 8. Mountain road safety monitoring 9. Real-time weather alert system 10. Disaster response coordination platform
C3	Smart Agriculture and Precision Farming	AgriTech, smart farming and sustainable agriculture	Functional prototypes, monitoring systems and scalable agricultural solutions	1. Smart irrigation system 2. Crop disease detection system 3. Soil health monitoring platform 4. Smart greenhouse model 5. Weather-based farming advisory system 6. Automated pest detection system 7. Water-saving agriculture techniques 8. Smart crop monitoring dashboard 9. Post-harvest storage management system 10. Precision farming using sensors and AI

Theme Code	Theme Name	Focus Area	Expectations	Suggested Problem Statements
C4	Digital Governance and Citizen Services	E-governance, public services and digital citizen support	Software platforms, governance applications and digital service solutions	1. Public grievance redressal portal 2. Village administration management system 3. Digital transparency dashboard 4. Online document verification system 5. Smart citizen service platform 6. Rural digital access system 7. Government scheme awareness application 8. Smart complaint tracking system 9. Digital attendance and record management 10. Community information and alert platform
C5	Sustainable Energy and Waste-to-Wealth	Sustainability, renewable energy and waste management	Functional prototypes, recycling systems and sustainable technology solutions	1. Waste-to-energy system 2. Biochar production model 3. Plastic recycling system 4. Organic waste management platform 5. Green transportation solutions 6. Energy-saving smart systems 7. Sustainable fuel alternatives 8. Waste segregation and monitoring system 9. Circular economy innovation platform 10. Eco-friendly product development system
C6	Healthcare Technology and Rural Well-being	HealthTech, rural healthcare and medical innovation	Practical healthcare applications, monitoring systems and assistive technologies	1. Telemedicine platform for rural areas 2. Wearable health monitoring system 3. AI-based disease diagnosis system 4. Emergency medical response system 5. Medicine reminder application 6. Smart patient monitoring dashboard 7. Rural healthcare accessibility platform 8. Health awareness mobile application 9. Low-cost assistive healthcare device 10. Digital health record management system
C7	Geospatial Technology and Remote Sensing	GIS, satellite applications and environmental monitoring	Geospatial analytics platforms, mapping systems and monitoring solutions	1. Flood mapping system 2. Forest monitoring platform 3. Glacier observation system 4. Climate monitoring dashboard 5. Land-use mapping application 6. Disaster-prone area mapping 7. Smart terrain analysis system 8. Water resource mapping platform 9. Environmental change monitoring 10. GIS-based village planning system

Theme Code	Theme Name	Focus Area	Expectations	Suggested Problem Statements
C8	Startup Innovation and Entrepreneurship	Entrepreneurship, startup development and innovation	Startup-ready business models, scalable platforms and innovative solutions	1. Agri-business platform 2. Smart tourism management system 3. Local artisan marketplace 4. Eco-friendly product startup 5. Rural logistics and delivery platform 6. Sustainable packaging business idea 7. Digital platform for local products 8. Healthcare startup for rural areas 9. Community service-based startup 10. Himachal local product promotion platform
C9	Cybersecurity and Digital Safety	Cybersecurity, data protection and digital safety	Security applications, monitoring systems and awareness solutions	1. Anti-phishing detection system 2. Cyber awareness platform 3. Secure digital payment system 4. Malware detection application 5. Secure login and authentication system 6. Network security monitoring platform 7. Data privacy protection system 8. Secure online examination system 9. Smart surveillance and alert system 10. Cybercrime reporting and awareness portal
C10	Smart Transportation and Mobility Systems	Intelligent transportation and smart mobility	Functional prototypes, monitoring systems and mobility solutions	1. Smart parking management system 2. EV charging monitoring system 3. Traffic analytics dashboard 4. Emergency vehicle priority system 5. Smart traffic signal control 6. Public transport tracking system 7. Road safety monitoring platform 8. Smart navigation and route optimization 9. Sustainable transportation solutions 10. Vehicle monitoring and alert system
C11	Drone Technology and Autonomous Systems	UAV systems, aerial monitoring and drone applications	Functional drone prototypes, aerial monitoring systems and deployable UAV solutions	1. Agricultural monitoring drone 2. Disaster surveillance drone 3. Drone-based mapping system 4. Medical supply delivery drone 5. Search-and-rescue UAV 6. Forest fire monitoring drone 7. Traffic monitoring drone system 8. Environmental monitoring UAV 9. Smart drone navigation system 10. Drone-based emergency response system

Theme Code	Theme Name	Focus Area	Expectations	Suggested Problem Statements
C12	Business Innovation and Entrepreneurship in Himachal	Himachal entrepreneurship, local business and startup innovation	Business models, startup ideas and local product innovations	1. Apple-based startup ideas 2. Himachali handicraft business models 3. Herbal and organic product startups 4. Eco-friendly packaging for local products 5. Tourism-based entrepreneurship in Himachal 6. Women-led business initiatives 7. Local café and food startup ideas 8. Rural delivery and logistics solutions 9. Marketing of Himachali products through digital platforms 10. Sustainable livelihood business models
C13	Digital Marketing and E-Commerce for Himachal Products	Digital commerce and online marketing for local products	Digital platforms, branding systems and e-commerce solutions	1. E-commerce platform for Himachali products 2. Digital marketing for apple and fruit farmers 3. Online handicraft marketplace 4. Tourism promotion through social media 5. Branding of Himachali local products 6. Online booking platform for homestays 7. Digital promotion for local festivals 8. Customer engagement platform for local businesses 9. Rural e-commerce support systems 10. Digital sales platform for women self-help groups
C14	Innovation in Himachal	Rural livelihood, sustainable villages and community innovation	Survey-based projects, awareness systems and rural development solutions	1. Smart village development for Himachal 2. Rural employment generation systems 3. Eco-tourism development in villages 4. Waste management solutions for hill areas 5. Digital literacy in remote villages 6. 7. Sustainable water management in hilly regions 8. Local resource management systems 9. Community-based organic farming initiatives 10. Rural healthcare awareness platforms
C15	Media, Tourism and Cultural Promotion of Himachal	Media communication, tourism and cultural heritage	Awareness campaigns, communication systems and cultural promotion projects	1. Digital promotion of Himachali tourism 2. Social media campaign for local culture 3. Promotion of folk music and dance 4. Himachali language and heritage awareness 5. Community radio for rural communication 6. Tourism awareness campaigns 7. Digital storytelling of Himachal traditions 8. Promotion of local festivals and fairs 9. Media platform for local artisans 10. Communication strategies for sustainable tourism

DIVISION D — POSTGRADUATE / Ph.D. LEVEL

Scope

Research-based projects, advanced computational systems, deep-tech innovation, policy-integrated solutions and deployment-ready technologies.

Theme Code	Theme Name	Focus Area	Expectations	Suggested Problem Statements
D1	Advanced AI/ML, Robotics and Automation	Artificial intelligence, robotics and autonomous systems	Research-grade prototypes, intelligent frameworks and deployment-ready systems	1. Swarm robotics for disaster response 2. Autonomous rescue and surveillance systems 3. Explainable AI for governance and healthcare 4. AI-driven infrastructure monitoring 5. Intelligent traffic optimization platform 6. Autonomous industrial automation systems 7. Multi-agent emergency response intelligence 8. AI-powered predictive maintenance system 9. Smart robotic assistance platform 10. Generative AI for real-time decision support
D2	Climate Resilience and Disaster Risk Reduction	Climate intelligence, disaster prediction and resilience systems	Advanced predictive models, analytics platforms and research-based solutions	1. Glacier melt prediction system 2. AI-based flood forecasting platform 3. Climate vulnerability indexing system 4. Landslide susceptibility prediction model 5. Cloudburst prediction framework 6. Heatwave and drought monitoring system 7. Watershed risk assessment platform 8. Satellite-based climate monitoring system 9. Disaster recovery and resilience analytics 10. Climate adaptation decision-support platform
D3	Remote Sensing, GIS and Digital Twin Applications	Geospatial intelligence, GIS and digital simulation systems	Advanced analytics platforms, simulation models and geospatial intelligence systems	1. Smart city digital twin platform 2. Predictive terrain analytics system 3. GIS-based disaster intelligence platform 4. Satellite-based environmental monitoring 5. Infrastructure monitoring using GIS 6. Urban climate simulation system 7. Watershed management analytics platform 8. Real-time geospatial monitoring dashboard 9. Land-use change detection system 10. Digital twin for mountain ecosystem monitoring

Theme Code	Theme Name	Focus Area	Expectations	Suggested Problem Statements
D4	Sustainable Infrastructure and Smart Cities	Smart urban systems, sustainable infrastructure and urban resilience	Research-based infrastructure systems, analytics platforms and smart city solutions	1. Urban heat island analytics system 2. Smart water infrastructure monitoring 3. Net-zero city planning framework 4. Intelligent transportation infrastructure 5. Smart waste management infrastructure 6. Energy-efficient building systems 7. Urban resilience and disaster planning platform 8. Smart drainage and flood management system 9. Sustainable mobility planning system 10. AI-based infrastructure health monitoring
D5	Public Health, Telemedicine and Biomedical Systems	Health intelligence, biomedical systems and digital healthcare	Research-based healthcare technologies, predictive analytics and medical innovation systems	1. Predictive epidemiology system 2. Biomedical signal analytics platform 3. AI-based disease diagnosis system 4. Rural telemedicine optimization platform 5. Smart patient monitoring system 6. Public health forecasting dashboard 7. Personalized healthcare recommendation system 8. Digital healthcare record intelligence 9. AI-powered emergency healthcare support system 10. Healthcare supply-chain monitoring platform
D6	Circular Economy and Environmental Accounting	Sustainability analytics, environmental intelligence and resource optimization	Research-driven sustainability platforms, analytics systems and environmental monitoring frameworks	1. Carbon accounting and monitoring system 2. ESG analytics dashboard 3. Industrial decarbonization framework 4. Circular manufacturing system 5. Waste valorization and recycling platform 6. Sustainable supply-chain analytics 7. Lifecycle sustainability assessment system 8. Resource optimization intelligence platform 9. Environmental impact forecasting model 10. Green finance and sustainability analytics system
D7	Deep-Tech Solutions for Viksit Bharat 2047	Strategic innovation, indigenous technologies and national-scale systems	Patent-oriented prototypes, research-driven platforms and deployment-ready deep-tech solutions	1. Sovereign AI ecosystem for India 2. Indigenous semiconductor innovation system 3. National cyber resilience platform 4. Autonomous public infrastructure intelligence 5. Defence and strategic monitoring system 6. Advanced sensing and surveillance technologies 7. Smart governance architecture platform 8. National-scale digital infrastructure framework 9. Intelligent manufacturing ecosystem 10. AI-powered strategic decision-support system

Theme Code	Theme Name	Focus Area	Expectations	Suggested Problem Statements
D8	Quantum Computing and Advanced Computing Systems	Frontier computing, high-performance systems and advanced computational intelligence	Research-grade computational frameworks, simulation systems and next-generation computing platforms	1. Quantum optimization framework 2. Neuromorphic computing system 3. Edge-AI computing platform 4. Quantum cybersecurity model 5. High-performance scientific computing system 6. Distributed intelligent computing framework 7. Real-time large-scale data analytics platform 8. Quantum-inspired AI system 9. Advanced semiconductor simulation framework 10. Energy-efficient computing architecture
D9	Advanced Drone Systems and Autonomous Mobility	UAV intelligence, autonomous systems and aerial analytics	Research-grade drone systems, autonomous mobility platforms and deployable aerial solutions	1. Swarm drone coordination system 2. Autonomous logistics and delivery drones 3. Drone-based infrastructure inspection platform 4. AI-powered surveillance UAV system 5. Disaster response and rescue drones 6. Precision agriculture drone analytics 7. Environmental monitoring drone network 8. Smart drone traffic management system 9. High-altitude monitoring UAV platform 10. Autonomous aerial mapping and analytics system
D10	Climate-Tech, Sustainability and Carbon Intelligence	Climate analytics, sustainability systems and environmental intelligence	Research-based climate technologies, predictive analytics platforms and sustainability intelligence systems	1. Climate digital twin platform 2. Carbon intelligence and monitoring system 3. Sustainable mountain ecosystem modelling 4. AI-based environmental forecasting system 5. Urban climate resilience analytics 6. Glacier-climate interaction modelling 7. Smart climate adaptation platform 8. Green infrastructure intelligence system 9. Net-zero transition analytics framework 10. Climate finance and sustainability intelligence platform
D11	Strategic Management and Business Intelligence for Himachal Development	Strategic planning, analytics and regional economic development	Research-based business frameworks, analytical systems and policy-driven innovation	1. Business intelligence for Himachali MSMEs 2. Sustainable tourism business strategies 3. Market analytics for apple and horticulture sectors 4. Rural entrepreneurship ecosystem modelling 5. Digital transformation for local businesses 6. Startup ecosystem development in Himachal 7. Supply-chain optimization for hill products 8. Consumer behaviour analytics for tourism 9. Sustainable livelihood planning systems 10. Strategic growth frameworks for mountain economies

Theme Code	Theme Name	Focus Area	Expectations	Suggested Problem Statements
D12	Digital Economy, Finance and FinTech for Rural and Mountain Regions	Financial innovation, rural banking and digital economy systems	Research-based financial frameworks and inclusive digital finance systems	1. FinTech solutions for remote villages 2. Digital payment systems for rural markets 3. Financial inclusion platform for self-help groups 4. AI-based cooperative banking analytics 5. Smart taxation systems for local businesses 6. Blockchain-based supply-chain tracking for horticulture 7. Fraud detection in rural digital banking 8. Digital economy forecasting for Himachal 9. Sustainable finance analytics for eco-tourism 10. Digital lending platforms for farmers and startups
D13	Public Policy, Governance and Sustainable Mountain Development	Governance systems, rural policy and sustainable development	Policy research frameworks, analytical studies and governance intelligence systems	1. Smart governance framework for hill districts 2. Policy analytics for rural development 3. Sustainable tourism governance systems 4. Disaster governance for mountain regions 5. Public health governance in remote areas 6. Digital governance for Panchayats 7. Education policy assessment for hilly regions 8. Community participation models for development 9. Urban-rural migration analytics in Himachal 10. Sustainable mountain ecosystem policy framework
D14	Media, Communication and Cultural Heritage of Himachal	Media studies, communication systems and cultural analytics	Research studies, digital preservation systems and communication intelligence frameworks	1. Digital preservation of Himachali folk culture 2. AI-based tourism communication platform 3. Social media analytics for tourism promotion 4. Documentation of Himachali traditions and rituals 5. Media literacy in rural mountain communities 6. Community communication systems for disaster awareness 7. Digital storytelling of local heritage 8. Preservation of local dialects through digital platforms 9. Communication strategies for eco-tourism 10. Cultural intelligence and heritage mapping systems
D15	Indigenous Knowledge Systems, Himalayan Culture and Future Civilizations	Himalayan knowledge systems, cultural intelligence and sustainable future living	Research-based cultural analytics, indigenous innovation frameworks and sustainable civilization models	1. Digital preservation of Himachali tribal knowledge systems 2. Scientific validation of traditional Himalayan practices 3. Indigenous climate adaptation systems in mountain villages 4. Himalayan food systems and nutritional intelligence 5. Traditional architecture for climate-resilient living 6. AI-based documentation of folk culture and oral histories 7. Sustainable lifestyle models from Himalayan communities 8. Traditional medicine and herbal intelligence systems 9. Cultural mapping and heritage analytics for Himachal 10. Future sustainable civilization models inspired by Himalayan ecosystems

Division	Eligible Participants
Division A	School Students (Classes VI–VIII)
Division B	School Students (Classes IX–XII)
Division C	Undergraduate Students (B.Tech / B.Sc / BBA / B.Com / BA / BCA / Equivalent)
Division D	Postgraduate & Research Scholars (M.Tech / MBA / M.Sc / M.Com / MA / MCA / Ph.D. / Equivalent)

TEAM COMPOSITION	
Division	Team Size
Division A	1–3 Students
Division B	1–3 Students
Division C	1–3 Students
Division D	1–3 Participants

MENTORSHIP STRUCTURE	
Participant Category	Assigned Mentors
Division A & B School	Students Undergraduate/Postgraduate Student Mentors
Division C Undergraduate Teams	Faculty Mentors / Research Mentors
Division D Postgraduate & Ph.D. Teams	Faculty Mentors / Subject Experts / Research Supervisors

COMPETITION STRUCTURE		
Stage	Level	Description
Stage 1	Pre Event Level Innovation Competitions	There will be a pre event in either School/college/district level, Himachal Pradesh. Projects will be evaluated division-wise and theme-wise by expert screening committees.
Stage 2	Shortlisting & Selection	Based on evaluation, top-performing projects under each theme will be shortlisted for the state-level grand finale.
Stage 3	State-Level Grand Finale	Selected teams from all pre-event will participate in the Main Event at National Institute of Technology Hamirpur

SELECTION CRITERIA FROM PRE EVENT	
Category	Selection Criteria
Theme-wise Selection	Top 5–10 projects from each theme may be shortlisted
Evaluation Basis	Innovation, relevance, creativity, feasibility, presentation and impact
Screening Committee	Faculty members, domain experts, industry professionals and innovation mentors
Qualification	Shortlisted teams will qualify for the Main Event at NIT Hamirpur

EVALUATION PARAMETERS — DIVISION A (CLASSES VI–VIII)

Criteria	Weightage
Creativity and Ideas	30%
Understanding of Topic	25%
Presentation and Explanation	25%
Cleanliness and Effort	10%
Awareness and Social Message	10%

EVALUATION PARAMETERS — DIVISION B (CLASSES IX–XII)

Criteria	Weightage
Innovation and Ideas	25%
Understanding of Concept	25%
Presentation and Communication	20%
Practical Relevance	15%
Creativity and Design	10%
Social Awareness and Impact	5%

EVALUATION PARAMETERS — DIVISION C (UNDERGRADUATE LEVEL)

Criteria	Weightage
Technical Innovation	25%
Prototype Functionality	20%
Problem Relevance and Impact	15%
Feasibility and Scalability	15%
Presentation and Documentation	10%
Sustainability and Social Impact	10%
Startup/Commercial Potential	5%

EVALUATION PARAMETERS — DIVISION D (POSTGRADUATE / Ph.D. LEVEL)

Criteria	Weightage
Research Depth and Novelty	25%
Technical and Analytical Excellence	20%
Innovation and Original Contribution	15%
Practical Applicability and Deployment Potential	15%
Presentation and Research Documentation	10%
Policy/Societal/Environmental Impact	10%
Patent/Publications/Scalability Potential	5%

**SUBMISSION REQUIREMENTS —
DIVISION A (CLASSES VI–VIII)**

Required Documents / Materials Description	
Project Title	Name of the project/activity
Short Description	Simple explanation of the idea (100–200 words)
Chart / Poster / Model	Any chart, drawing, craft, poster or simple activity display
Student Details	Name, class, school and teacher details

**SUBMISSION REQUIREMENTS —
DIVISION B (CLASSES IX–XII)**

Required Documents / Materials Description	
Abstract	Brief summary of project (200–300 words)
Project Report	Problem statement, objectives and outcomes
PPT / Poster	Presentation material for evaluation
Survey / Activity / Model	If applicable
Student & School Details	Participant and institution information

**SUBMISSION REQUIREMENTS —
DIVISION C (UNDERGRADUATE LEVEL)
(B.Tech / B.Sc / BBA / B.Com / BA / BCA / Equivalent)**

Required Documents / MaterialsDescription	
Project Abstract	250–500 word summary covering problem statement, objectives and proposed solution
Project Synopsis	Detailed document including introduction, methodology, workflow, innovation aspect, expected outcomes and future scope
PPT / Poster Presentation	Presentation material for project demonstration and evaluation
Prototype / Software / Model	Functional prototype, application, dashboard, model or demonstration material (if applicable)
Technical Documentation	Architecture diagrams, workflow charts, implementation details, survey data, analytics or design process
Research / Survey Data	Field survey, case study, questionnaires or data analysis supporting the project (if applicable)
Innovation Impact Note	Brief note explaining uniqueness of the project, real-world usefulness, target beneficiaries and future implementation possibilities

**SUBMISSION REQUIREMENTS —
DIVISION D (POSTGRADUATE / Ph.D. LEVEL)
(M.Tech / MBA /MCA/ M.Sc / M.Com / MA / Ph.D. / Equivalent)**

Required Documents / MaterialsDescription	
Extended Research Abstract	300–500 word research summary including objectives, methodology, innovation and expected contribution
Research Paper / Concept Note	Detailed research document containing literature review, research gap, methodology, analytical framework, implementation strategy and expected outcomes
PPT / Research Poster	Presentation material for technical and research evaluation
Prototype / Framework / Simulation / Analytical	ModelResearch prototype, software platform, simulation system, analytical framework or deployable solution (if applicable)
Technical & Research Documentation details	System design, architecture diagrams, algorithms, datasets, validation methods, analytics and implementation
Research Data / Field Study	Experimental data, field surveys, datasets, simulations or case-study analysis supporting the work
Publication / Patent Details	Published papers, conference papers, patents, copyrights or IPR details (if available)
Impact & Scalability Note	Explanation of policy relevance, deployment potential, scalability and societal/environmental impact

Shiksha Mahakumbh 2026 – Project Expo

The Shiksha Mahakumbh 2026 – Project Expo is envisioned as a large-scale innovation, research and educational engagement platform aimed at nurturing creativity, problem-solving and youth-driven development aligned with the vision of Viksit Bharat 2047. The initiative is designed to create a strong ecosystem where school students, undergraduate learners, postgraduate scholars, researchers, faculty members and local communities collectively participate in building innovative solutions for regional and national challenges.

The Project Expo adopts a strong Himachal-centric approach by encouraging participants to focus on mountain sustainability, climate resilience, disaster management, rural livelihoods, indigenous knowledge systems, sustainable agriculture, water conservation, digital inclusion and community-based innovation. Himachal Pradesh faces unique geographical and developmental challenges such as landslides, cloudbursts, glacier changes, water scarcity in hilly regions and migration from rural areas. Through carefully curated themes and problem statements, the expo motivates participants to develop practical, research-oriented and socially impactful solutions addressing these regional concerns.

The initiative strongly aligns with the objectives of National Education Policy 2020 by promoting experiential learning, multidisciplinary education, innovation culture and skill-based development. NEP 2020 emphasizes learning through practical exposure, critical thinking, creativity and problem-solving rather than rote learning. The Project Expo transforms these principles into action by enabling students to work on real-life challenges, conduct surveys, create models, develop prototypes and present innovative ideas before experts and mentors.

One of the defining features of the Shiksha Mahakumbh 2026 – Project Expo is its structured mentorship ecosystem. Undergraduate students will mentor school students, helping them develop confidence, communication skills and foundational innovation capabilities. Faculty mentors and research experts will guide undergraduate, postgraduate and Ph.D. participants in research methodologies, technical development, documentation and innovation strategy. This collaborative framework creates a continuous pipeline of learning, mentorship and leadership development across academic levels.

The district-level competition model ensures inclusive participation from all regions of Himachal Pradesh by decentralizing innovation and creating opportunities at the grassroots level. Innovation competitions will be conducted in each district, where projects will be evaluated theme-wise and division-wise. The top-performing projects from every district will be shortlisted for the grand finale hosted at National Institute of Technology Hamirpur. This structure

enables students from remote, tribal and rural regions to actively participate and present their ideas on a state-level platform.

The initiative strongly reflects the spirit of “**Sabka Saath, Sabka Vikash**” by ensuring equal participation opportunities for students from diverse social, economic and geographical backgrounds. It encourages innovation not only from urban institutions but also from government schools, rural colleges and underserved communities, thereby promoting inclusive educational and innovation development across the state.

The framework also complements the vision of “**Ek District, Ek Product**” by motivating participants to develop projects and startup ideas linked to district-specific strengths, local resources, traditional crafts, agriculture, horticulture, tourism, herbal products, handloom and indigenous knowledge systems. Students are encouraged to identify local challenges and opportunities unique to their districts and create scalable solutions that can strengthen regional economies and sustainable livelihoods.

Additionally, the initiative promotes the broader vision of “**Har Ghar Vikash**” by connecting innovation with community development, local employment generation and social impact. Through youth-led projects in areas such as climate resilience, healthcare, water management, digital inclusion, sustainable farming and rural entrepreneurship, the program aims to ensure that innovation reaches every household and contributes to long-term social and economic transformation in Himachal Pradesh.

Youth participation is the foundation of the initiative. The expo empowers young minds to become innovators, researchers, entrepreneurs and community problem-solvers. Students gain exposure to teamwork, leadership, research, communication, entrepreneurship and technological thinking. Such engagement not only strengthens academic learning but also prepares youth for future innovation ecosystems, startup culture and national development missions.

The Project Expo also promotes startup and livelihood opportunities by encouraging innovation in sectors such as agri-tech, climate-tech, digital governance, local product development, sustainable tourism, healthcare accessibility and rural entrepreneurship. This can contribute significantly toward employment generation, local economic development and innovation-led growth in Himachal Pradesh.

The Shiksha Mahakumbh 2026 – Project Expo serves as a transformative platform integrating education, innovation, sustainability, culture and youth leadership. It aims to create a future-ready generation capable of contributing meaningfully toward the vision of a resilient, innovative and self-reliant Himachal Pradesh while supporting the larger national mission of Viksit Bharat 2047.
